Environmental Solutions Worldwide, Inc

First to Certify with ETV Canada Inc with High Performance DOC 66.7% Particulate (PM-10) Reductions

TELFORD, P.A.--(BUSINESS WIRE)--May 6th, 2003--Environmental Solutions Worldwide, Inc. (ESW) (OTCBB: ESWW), is proud to announce that it has become the first Company to receive a technology verification certification from Environmental Technology Verification (ETV) Canada Inc for a Diesel Oxidation Catalyst (DOC) converter. ESW's proprietary High Performance DOC achieved a reduction of Particulate (PM-10) of 66.7% by weighted average.

There are currently in excess of five million diesel utility engines below 50hp/37kW in use across North America alone. For example, these types of diesel engines power construction equipment, small generators and refrigerated transport trailer/rail cars. This is the market that the application scaleable Quiet Cat™ diesel catalyst/muffler is designed for.

ESW has been working with ETV Canada to have its Quiet Cat™ utility engine high performance catalyst/muffler's Particulate reduction verified within the ETV program. The verification process involved a full emission data review on behalf of ETV Canada by a third party emission lab.

Mr. Chris Shrive, P.Ag. General manager and Development Director, ETV Canada remarked "ETV Canada is pleased to have ESW join our roster of environmental technology performance verification graduates as a proven contributor to improved environmental quality, and in particular, have the first DOC technology to receive performance verification in the emissions reduction sector of the ETV Canada program. ESW's verification was one of the more expedient to go through the program, due in part to the thoroughness of the ESW submission, but also due to the knowledge and capability of ETV's selected verification entity, Bodycote Materials Testing Canada, in their independent application of ETV's verification protocol."

Mr. John Donohoe, ESW's CEO, President and Chairman commented, "Our management team is extremely pleased with ESW becoming the first diesel emission control manufacturer to become verified through the ETV Canada program. The confirmed Particulate (PM-10) emission reduction of 66.7% by weighted average, which is documented within this program, further validates the ESW DOC technology that has applications for both above and below 50hp/37kW. Our proprietary metallic substrate DOC continues to achieve Particulate reductions that we believe are unreachable by conventional ceramic or foil substrate DOC technology. Quiet Cat™ diesel utility engine catalyst/muffler systems continue to deliver needed performance to a sector of the market that is under EPA*/CARB scrutiny and regulations in North America, and by many other governments around the world. This is another milestone in the Company's catalyst program as we continue to progress through the full CARB heavy duty on-road diesel retrofit verification program as a level 2 device."

About ETV Canada Inc

Environmental Technology Verification (ETV) is an Environment Canada Program providing validation and independent verification of environmental technology performance claims. ETV Canada was established in 1997 to promote the commercialization and performance credibility of new environmental technologies into the market place and thus provide industry with a tool to address environmental challenges efficiently, effectively and economically. In June 1999, a Memorandum of Understanding (MOU) on the reciprocity of programs for the verification of environmental technologies was signed between Environment Canada and the California EPA. A similar reciprocity agreement is in place with New Jersey, and Canada and the U.S. EPA have a cooperative agreement in place to examine the harmonization of verification initiatives. ETV Canada operates as a component of the Ontario Centre for Environmental Technology Advancement (OCETA)

About Environmental Solutions Worldwide Inc.

With headquarters in Telford, Pennsylvania Environmental Solutions Worldwide is a publicly traded company engaged through its subsidiaries in the design, development, manufacture and sale of environmental technologies currently focused on the international automotive and transportation industries. ESW manufactures and markets a line of catalytic emission control products and catalytic conversion technologies for a multitude of applications.
