**Wayne Crocker, P.Eng  
President, CEO and Director**

**BIO:**

Wayne Crocker became President, CEO and a Director of Auramex Resource Corp. in 2009, shortly following his retirement from an investment dealer where he advised retail investors, mostly about junior mining exploration companies.

His university education began with a Bachelors of Applied Science in Met-

allurgical Engineering in 1967 from the University of British Columbia, followed by a Masters degree in Business Administration in 1971 from the University of Western Ontario. Later he completed studies resulting in a CFA designation from the University of Virginia.

Mr. Crocker is a Professional Engineer currently registered in British Columbia. In 1969, he first became a P.Eng. in the province of Ontario, and later transferred to B.C.

His work experience in the investment field began in 1971 in Toronto as an institutional mining analyst for six years and continued in Vancouver for 29 years between 1977 and 2009 where he was a mining analyst and/or stockbroker. Between 1980 and 1983, he was president of a listed junior gold exploration company, not unlike Auramex Resource Corp.

**Company Profile:**

Auramex Resource Corp. is a mining exploration company the shares of which trade on the TSX Venture Exchange. The Company has three projects. One, acquired in 1990, called the Brandywine property, is located 90 kilometres north of Vancouver with targets prospective in silver, zinc and gold mineralization. The second, acquired in 2003, called the Magenta property, is located in Sinaloa State, Mexico with targets prospective in gold, cobalt, nickel, copper and silver mineralization. Within the Magenta boundary, the Company holds an option to purchase the El Fierro concession. The third property, acquired between September 2005 and October 2010, called the Stewart Properties, is

a grassroots exploration project located near Stewart, BC.

**Interview conducted by:  
Lynn Fosse, Senior Editor  
CEOCFO Magazine**

**CEOCFO:** Mr. Crocker, what is the overview of Auramex?

**Mr. Crocker:** We have three exploration properties, two in British Columbia and one in Mexico that are all excellent targets for exploration. It is basically a case of good properties in a bad market. We are looking for funding and advancing properties.

**CEOCFO:** Were the different locations by design or strictly opportunistic?

**Mr. Crocker:** The first small property called Brandywine, just north of Vancouver by ninety kilometers, came with the company when we acquired it. We went to Mexico after that to get a property that could be worked on in the off-season, and subsequent to that, we acquired our best property, which is up near Stewart B.C., and is as people may or may not know, fifteen hundred kilometers by road north of Vancouver. It has turned out to be our largest and best property, with 41,000 hectares in that location, and consisting of a previously producing gold mine and a large number of drill targets.

**CEOCFO:** Would you tell us a little more about each property- the geology and the reason why the properties are of interest?

**Mr. Crocker:** My background is metallurgical engineering. I am not a geologist. I used to be a mining analyst. In terms of the geology, the property

up near Stewart has a suite of rocks that run for probably well in excess of one hundred kilometers to the north as well as to the south where we are located. Within those properties, there are some very large gold deposits, notably the Seabridge property, which has the Mitchell and Kerr deposits, and Pretium, which is a highly successful stock with the Bruce Jack property. Pretium for example, has in the order of eight million ounces of gold that grades almost a half an ounce, plus a great deal of lower grade as well. It is a suite of rocks that has previous producing gold mines on it and within it.

**CEOCFO:** What is special about the properties?

**Mr. Crocker:** It is an area that had prospective gold mines historically, and the rocks are suitable throughout a lot of different locations. It was previously known as the Golden Triangle, or has been called that in the past. It is a great hunting ground to find a gold mine or find a metallic mine.

**CEOCFO:** Would you tell us about your other properties?

**Mr. Crocker:** The property in Mexico is 6000 hectares in size which is seven kilometers by eight kilometers and maybe a little more. It surrounds the previous producing gold mine and it has a great number of targets that have been identified by an airborne geophysical survey and some IP that was done. We have not spent a great amount of work on it; it needs a lot more work and we would option it out if somebody were to take an interest.

**CEOCFO:** Do you own your properties 100%?

**Mr. Crocker:** Except for a small piece of the property in Mexico, all are 100% owned by Auramex. Some of them carry overriding NSR obligations to the vendors when we acquired them; all of those are capped off one or two million dollars.

**CEOCFO:** Security is always a concern in Mexico. Would you tell us about your location?

**Mr. Crocker:** We have been there since 2003 and have never had any problems. The property is situated about twenty kilometers north of Culiacan, in the state of Sinaloa. People read the papers and I am sure they do, it is known as the Sinaloa cartel, which is one of the drug gangs that exist along with the Zetas and others. They are probably headquartered out of Culiacan, which is the capital city of Sinaloa State. We are twenty kilometers by paved road just north of Culiacan and there is no drug activity any longer on our property. There used to be some marijuana in the property area but that has gone further north. The road is now paved up to our property and we can get into it in good weather with a two-wheel drive vehicle.

**CEOCFO:** What is happening on the ground in the various projects, and what do you see for the next year or so?

**Mr. Crocker:** We have permits for

**We have three exploration properties, two in British Columbia and one in Mexico that are all excellent targets for exploration. - Wayne Crocker**

five drill targets, and those are three-year drill permits on our Stewart property. They were selected based on some airborne geophysics that was done in 2009 and 2010 as well as some soil sampling and geological work on these targets. We spent over \$700 thousand on airborne geophysics because the property is so large that we needed to focus on the best looking areas. As you probably know 41,000 kilometers is forty kilometers by ten kilometers in dimensions if you put it all in a box. It is a rather huge property and consists of three parcels. The key thing is that we not only have these very good looking drill targets available once we get some funding but also we have the Georgia River Gold mine which is a previously producing gold mine that we bought outright. We have no royalty obligations on it. It was produced in the early nineteen hundreds and there are some historical reports, probably eight or nine of them in total from various geologists who worked for companies in the past between 1979 and 2004.

The historical estimate is 321 thousand tons of 0.839 ounces of gold per ton and that is across a four foot mining width in one vein. Seven are known to be gold bearing out of a total of twenty-two veins in that location on the property. It is called the Georgia River Gold mine and we think it is one of our "back-stop" assets for this company and its shareholders.

**CEOCFO:** You mentioned funding a few times. Have people been paying attention, and how do you get the awareness you need?

**Mr. Crocker:** The short answer is not really. We are talking about getting a million-dollar financing, and there are a number of requirements in order to do that, which may or may not happen this fall. That funding would primarily be utilized for drilling the targets that I mentioned, one or two of them at least. The second point is that we are also talking and trying to raise about \$5 million to advance this Georgia River Gold mine, which has a fairly substantial historic resource on it, and there are people who are interested, but there is nothing firm at this point.

**CEOCFO:** Are you still looking at properties or would you consider another property?

**Mr. Crocker:** We are actually looking to joint venture our various properties to parties who would be willing to spend some money there for a partial interest, preferably if they would drill. These properties are at an advanced stage now where they need to be drilled and we would not only seek the funding that I mentioned, but if a great kind of arrangement came along, we would probably even consider a merger with another company that could help us to advance the situation.

**CEOCFO:** Why should investors pay attention to Auramex today?

**Mr. Crocker:** The stock is grossly undervalued considering what we have, notwithstanding the fact that we have a previous producing gold mine. It is trading at \$0.01 to one and a half cents and there are eighty-one million shares out. The company has a very small market cap. That is a

problem right now for us because the stock is cheap. On the TSX Venture Exchange in Toronto, the minimum financing price is \$0.05 a share and we are below that. We have no approval from shareholders to do any

kind of a share consolidation at this point in time, but either the stock has to go up a bit higher or that may become a necessity. We are among various other companies out there, many of which also do look good, but

have just been beaten down so badly in this market. When the stock is trading at \$0.01, it is pretty easy for it to double or triple without much difficulty if anybody wants to take a position in the stock when it is this low.
