President and CEO**

BIO: Gordon Cummings C.A. CEO & President Mr. Cummings has over 20 years of experience in finance and management including senior managerial positions in two of the Big 4 audit firms and the role of Group Accountant with a London, England based insurance group listed on the New York Stock Exchange. He most recently held the position of CFO and then subsequently CEO and Director of a Canadian alternative investment manager that develops and distributes public, full prospectus funds. Mr. Cummings holds an accounting degree from the University of Glasgow and is a member of the Institute of

Chartered Accountants in England & Wales and in British Columbia.

Company Profile:

Kimber Resources Inc. is a gold-silver exploration and development company focused in Mexico. Kimber's mission is to build shareholder value through the discovery, definition and development of gold and silver deposits in Mexico, turning them into profitable mining operations while maintaining safe work conditions, protecting the environment and building strong relationships with local communities and stakeholders.

Kimber Resources is a Vancouver based company and trades on the NYSE AMEX (ticker KBX) and trades on the Toronto Stock Exchange (ticker KBR).

**Interview conducted by:
Lynn Fosse, Senior Editor
CEOCFOinterviews.com**

CEOCFO: Mr. Cummings, what is the strategy and focus at Kimber Resources?

Mr. Cummings: Kimber Resources is a gold-silver exploration and development company. The goal is to grow its gold-silver mineral resource base and advance towards production.

CEOCFO: What types of projects are you looking at as far as scope, scale, location?

Mr. Cummings: Our flagship project is Monterde, where Kimber owns 100% of mineral concessions covering over 29,000 hectares of land in the northern Sierra Madre gold-silver

belt in Mexico. Monterde is our current focus in terms of both exploration and development. We are currently conducting a 30,000 meter drill program, which we commenced in January this year, and are looking to complete a pre-feasibility study for the project during 2011.

CEOCFO: Sierra Madre is a very prolific area; what do you specifically like about the Monterde project?

Mr. Cummings: The company has held Monterde project 100% since around 2000 before the company was initially listed on the TSX Venture in 2002, and between 2002 and 2007 there was a significant amount of drilling at the project. From 2007 to 2009 there was an extensive reinterpretation and remodeling of the geology at the deposits at Monterde, leading to a high-grade mineral resource estimate, which was reported at the end of 2009 and a preliminary assessment technical report filed in September 2010. The preliminary assessment shows that, based on the core of high-grade gold and silver at Monterde, there is good potential for a long lived mine with low-cost gold-silver production through a combination of open pit and underground mining.

CEOCFO: Would you give us some specifics on the drilling program?

Mr. Cummings: We have different phases in the drill program that we are conducting. The initial drilling that is taking place at present is designed to upgrade and expand the mineral resources in the area, which we believe will be open-pit at the top of the Carmen and Veta Minitas depos-

its. This initial drill phase will be followed up by drilling at depth and along strike at the Carmen and Veta Minitas deposits in order to expand and upgrade the deeper gold-silver mineral resources. We also have exploration targets in three new areas to the north of the main Carmen deposit. We are also looking at further regional exploration as we believe that there is still exploration upside at the project as a whole.

CEOCFO: Do you plan to continue with 100% ownership?

Mr. Cummings: Our plan is to continue holding the Monterde project. Kimber is looking to expand and upgrade the mineral resources and to advance towards a production decision.

CEOCFO: Some people have expressed concern about the projects in Mexico given the current atmosphere; how do you feel about the territory itself, and do you see any reason for concerns?

Mr. Cummings: Mexico is an excellent location to have a gold-silver project in the world based on a number of factors. First, it has a strong history of mining and the local people are very receptive to mining operations. There are a number of very good educational establishments in Mexico for geologists and engineers so that mining and exploration companies have access to very well trained local people. Specifically, the Sierra Madre gold-silver belt is an excellent area to be operating in where there a number of multi-million ounce gold-silver mines in production and there is a good level of existing infrastructure in terms of roads, power and other utilities. Another advantage of Mexico is that the local currency, the Mexican Peso, has not appreciated against the US dollar in the last five years making Mexican costs quite competitive when compared to other mining countries like Australia and Canada whose currencies have appreciated significantly against the US dollar in the last several years. There have been security

concerns regarding certain parts of Mexico in recent years, but we still believe that the Monterde project in Chihuahua is a good place to have operations. We remain optimistic about its future potential.

CEOCFO: Are there newer drilling techniques you are able to take advantage of today?

Mr. Cummings: Technology is always advancing but I don't think there have been many drilling developments in drilling methods used by us that have changed things significantly in the last two or three years.

CEOCFO: Would you tell us more about the mineralization and what you

Kimber has the potential to make the transition over the next few years from being an advanced gold-silver exploration company to becoming an emerging producer. Kimber is aiming to complete a pre-feasibility study in 2011 and then continue advancing along a development path. The high-grade gold-silver mineral resources at Monterde give Kimber an excellent opportunity to aim for low cost production. Lastly, we believe that there is a significant amount of exploration potential at Kimber, at existing deposits and new targets. By exploring at Monterde to grow gold-silver mineral resources and advancing towards a production decision, Kimber is well placed to benefit from this bull market in gold and silver. - Gordon Cummings C.A.

have seen there so far in terms of the gold and silver?

Mr. Cummings: The Monterde project contains gold-silver deposits with no significant base metals. It is at an elevation of around 1,500 to 2,500 meters above sea level. The nature of the mineralization is low-sulphidation, epithermal gold and silver with deposits interpreted as having a series of high grade shear structures surrounded by low grade halos of gold and silver. Most of the perceived value is in these high-grade gold-silver structures, which appear to steepen with depth. We believe that the Monterde project has the potential for profitable mining.

CEOCFO: What is the financial picture like for Kimber Resources today?

Mr. Cummings: We recently did a public offering, which was closed in December, so at the end of December 2010 we had \$13.7 million Canadian of cash and no long term debt. We believe that we are in a strong financial position to execute the 30,000 meter plus drill program, complete a pre-feasibility study during 2011 and continue advancing the project towards a production decision.

CEOCFO: Do you have some other projects on the back burners?

Mr. Cummings: We have a couple of other projects in Mexico. But we just see the potential at Monterde as being so strong that Monterde is the best place for Kimber to deploy the majority of its cash and human resources in 2011. We are always receptive to carrying out exploration at other projects or reviewing the exploration potential at other projects, but during the next six to twelve months, our principle focus will be the Monterde project, which is 100% owned with no options or royalties.

CEOCFO: In closing, why should potential investors pick Kimber Resources out of the crowd?

Mr. Cummings: Kimber has the potential to make the transition over the next few years from being an advanced gold-silver exploration company to becoming an emerging producer. Kimber is aiming to complete a pre-feasibility study in 2011 and then continue advancing along a development path. The high-grade gold-silver mineral resources at Monterde give Kimber an excellent opportunity to aim for low cost production. Lastly, we believe that there is a significant amount of exploration potential at Kimber, at existing deposits and new targets. By exploring at Monterde to grow gold-silver mineral resources and advancing towards a production decision, Kimber is well placed to benefit from this bull market in gold and silver.
