William R. Wilson
Director, President and COO

BIO:

Mr. Wilson's corporate experience includes creating and managing eleven mining companies over 25 years as director, officer and/or CEO with mines and properties in the United States, Canada, Russia, Democratic Republic of Congo

and Ukraine. He managed a large portfolio of uranium properties in Grand County, Utah for Buttes Resources as Vice President - Mining. Prior to the formation of New Horizon Uranium Corporation in October 2005, Mr. Wilson was President of Basin Perlite Company from October 1999 to January 2004 and Vice President - Mining of Tonogold Resources Inc. from April 2004 to August 2005. He is a graduate of the Colorado School of Mines with a Metallurgical Engineer degree and of the University of Southern California with an MBA. He currently serves as director and as chairman of the audit committees for BRC Diamond Corporation and Nevada Bob's International Inc. both listed on the TSX-V. Mr. Wilson is a member of AusIMM, the Mining and Metallurgical Society of America, the Canadian Institute of Mining and the Society of Mining, Metallurgy and Exploration.

Company Profile:

New Horizon Uranium Corporation is a uranium exploration and development company founded in October 2005. The company began trading April 17, 2007 on the TSX-V under the symbol NHU-V.

New Horizon is the operator of two joint ventures in Converse County, Wyoming. The ventures control more than 12,000 acres on the White River Formation. The Company intends to explore and develop this project area and further investigate if it has potential to be an In-Situ Recovery ("ISR") operation. Additional exploration opportunities are being investigated in Colorado, Utah, New Mexico and Texas.

New Horizon is continually exploring and developing its current projects while

aggressively searching for new opportunities to grow its uranium portfolio.

Interview conducted by:
Lynn Fosse, Senior Editor
CEOCFOinterviews.com

CEOCFO: Mr. Wilson, what was your vision when the company was founded and where are you today?

Mr. Wilson: "It started as a simple idea - I had the opportunity to discuss the idea of a uranium exploration company with the chairman of International Royalty Corporation, Doug Silver, a long time colleague. He suggested that IRC would provide the venture capital to get the company started if I put together the right team together. That was our start, and IRC has been very supportive of New Horizon and two of their senior people sit on our board."

CEOCFO: What was your idea?

Mr. Wilson: "The idea was to start an exploration company from scratch that would be unique in that we would put the team together first and then go out and look at properties rather than find a bunch of properties and hope somebody could value them. Our plan was to put the team together first, so that with each prospect we brought in, the team was looking at it from the start. I think that was somewhat different from many of our peers."

CEOCFO: Please tell us about the properties that you have under your belt now.

Mr. Wilson: "We have two very important properties. One is in the southern part of the Powder River base in Wyoming, where uranium has been mined for

many years and continued even with the downturn in uranium. Over the last twenty years, it has continued to be a producer primarily within In-Situ Recovery (ISR) type projects. We had the opportunity to pick up a large property in joint venture with Canyon Resources who had originally drilled some of that area back in the 1980's. They moved on to gold so we formed a JV with them for the management of the uranium joint venture, which is now our Converse Project. Shortly after that, we added in another group of properties in that same area held now by Uranium One, who are a major player in the uranium business. They are our joint venture partner in the other part of the Wyoming play, known as Sand Creek. It is rather complicated, but we manage both joint ventures with both joint venture partners with some overlap of the properties. We plan for Converse-Sand Creek to be an In-Situ Recovery project; we have had good results so far and we are going to continue to drill that property.

Our other large property where we own 100% is the Summit Project on the Colorado Plateau in the southeastern part of Colorado. We purchased a database and went to many of the landowners there, signed up leases and started drilling on that property early this summer. We had some good results to start with and plan to continue drilling the property with a view to establishing its potential as an underground mine. The advantage that we have there is that Summit is located between a licensed mill in Utah owned by Denison and a planned mill in Colorado owned by Energy Fuels. Energy Fuels has moving along with permitting on their mill and we like the fact that we good properties near what may be two of four possible uranium mills in the entire United States. We are also looking in Utah, Nevada and South America. We are getting some geologic diversity as well as some geographic diversity."

CEOCFO: Why do you like uranium?

Mr. Wilson: "We like uranium because unlike many commodities there is no substitute. Uranium is the basic fuel for nuclear power reactors and nuclear power reactors are a very important part of the

worldwide energy sources. Much of the energy growth in China and India, with their booming economies, is going to be nuclear energy. There is currently a 20% shortfall between the demand by the nuclear energy vs. what the uranium industry that can supply. The reason that I personally like uranium is because, in the last boom, I was involved in uranium exploration and mill development and I know many of the current players. I understand the industry and the things that some of my peers have been successful with and avoid where some of them have not been successful."

CEOCFO: Do you prefer in general to own a project 100% or does it depend on the project?

Mr. Wilson: "It really does depend on the project. The first project we started with was a joint venture. We had some critics that said we had to pay \$1 million to earn our 50%, but we knew the joint venture partner very well and Canyon

"Our team experience, our joint venture partners and other affiliations in the industry and our geologic and geographic diversity position us to move out in front of many of our peer uranium companies." - William R. Wilson

Resource was literally in our back yard in Golden, Colorado. Later we were able to bring in Uranium One a second joint venture partner who contributed their properties for a 30% interests in the Sand Creek joint venture.

The Summit Project in Colorado was from scratch and built up our property ownership to over 3,000 acres. We continue to do that and as we drill there, we are finding ourselves in a very good operational situation down the road.

It depends very much on the circumstances. I do not know if I have a preference, we have to look at each one and decide whether it is in our best interest to go in where you do not own 100%. It could be much bigger if you owned 50% of a large piece of the pie, rather than owning 100% of a small project."

CEOCFO: What is in Argentina that is of interest to you?

Mr. Wilson: "Two of our directors, George Young and Paul Jones have worked in Argentina. They have very good history down there in mining projects; they know the government, the industry, and they have good connections. One of our geologists Steve Davis has worked extensively in Argentina. We feel the country has some very good uranium opportunities that have been overlooked to a great extent. The government has had an atomic energy agency for many years and they have a pretty good base to start with."

CEOCFO: What is ahead and what is the timetable going forward?

Mr. Wilson: "The opportunity to get our Colorado property into production as an underground mine is our short-term project. An underground mine can be rapid in terms of permitting. Energy Fuels who are developing the mill nearby are doing the hard permitting on the mill. Paul Jones my partner and I know a lot about underground mining and we know Colorado mining and regulations very well having both operated mines in Colorado. The Wyoming project as an ISR property will take longer but we are very encouraged about what we have seen so far.

As we are working on those two more advanced projects, we are looking for good targets to expand our portfolio in other areas in the United States. Our so-called Blue Sky will certainly be in South America because those are more likely projects that will take longer to develop. The market likes Blue Sky; it likes to see projects that have a lot of upside."

CEOCFO: Why should potential investors pick New Horizon Uranium out of a crowd?

Mr. Wilson: "Our team experience, our joint venture partners and other affiliations in the industry and our geologic and geographic diversity position us to move out in front of many of our peer uranium companies."

CEOCFO: In closing, what is the biggest task ahead for New Horizon Uranium?

Mr. Wilson: "Our biggest task ahead is to build our shareholder base as we continue to build our property portfolio. We

want to get exposure to many of our shareholders in Canada; we would like to expand that shareholder base with indi-

vidual investors as well as institutional investors up there. We are giving some consideration to a potential registration in

the United States so that we may broaden our shareholder base in the U.S.”
